

Press release

eBlocker Family: Fully protected on the net

- **eBlocker Family provides anonymous and safe Internet surfing for the entire family**
- **Limit surfing time, restrict access to unwanted content and much more by using Parental Control**
- **Individual user accounts can be adjusted to the needs of each individual member of the family**

Parents are aware of this problem: the pubescent daughter regularly surfing the internet for too long or the teenage son lands on websites that are not appropriate for his age. The eBlocker Family puts this to an end and allows both safe and anonymous surfing for the entire family. Children are protected by the smart features of the eBlocker Family before accessing unwanted content during surfing. Parents can, for example, restrict access to certain website categories (for example "erotic content"), limit surfing times, and additionally define "restricted" or "allowed" websites. Like the reliable eBlocker Pro, the eBlocker Family also provides its users with additional privacy on the Internet by blocking all third-party collecting services and online advertising. The family and user-friendly device sets a further milestone in our fight against the unaware data collection on the Internet.

Both the eBlocker Pro and the eBlocker Family are multi-user capable. With the eBlocker Family, however, up to ten user accounts can be set up and adapted to the individual needs of each family member. For example, a parent as an administrator is authorized to assign devices and profiles to their respective user accounts and to set up "restricted" and "allowed" websites. The administrator can also specify exceptions and additions to given website filters per user profile. Each family member also has the option to create individual whitelists for e.g., to allow advertising for certain websites. On request, the eBlocker Family can also anonymize the visible IP address of the user either via the *Tor* network or via a VPN provider.

Like the eBlocker Pro, the eBlocker Family is simply connected to the home network via Plug & Play, configures itself automatically and thus protects almost all devices from tablet to game console. Simply unpack, plug-in and the privacy is protected. A complex software installation on each individual terminal is not necessary. The eBlocker Family is also suitable for technically less savvy Internet users.

The features of the eBlocker Family at a glance:

- Filtering of all known tracking systems and reliable blocking data collection
- Plug & Play: easy to connect and get started without any software installation
- Filtering of unwanted content for children
- Compatibility with virtually all operating systems, devices and browsers
- Multi-user capability: Up to 10 individual user accounts can be defined
- Assigning devices and protection profiles to the respective user accounts
- Definition of individually restricted or allowed websites
- Definition of exceptions and additions to given site filters
- Limitation of Internet usage optionally after fixed times and / or duration of use
- Support for devices used by several people

About eBlocker GmbH

After two years of development in secret, eBlocker, headquartered in Hamburg, Germany, was launched in 2015. Their products, eBlocker Pro and eBlocker Family, empower users to regain control of their privacy and personal information while surfing the Internet and have full control over their data once again. The eBlocker Family, in addition, provides protection for not only individual users but also children within the household. The devices work by using a specially developed security-software that confirms that all tracking- and ad-networks are blocked effectively and with full freedom of choice from all Internet devices. Thanks to easy installation, automatic configuration and software-updates, the eBlocker can be simply put to use even by technically inexperienced users. www.eblocker.com
